

**Schema:**

A structured framework that defines the organization, attributes, and relationships of data within a system

- name: The designated name of the schema.
- Description: A short summary outlining the key characteristics of the schema.
- creation\_date: The timestamp when the schema was inserted. For example, "2025-02-17 08:56:09"

**SchemaObject:**

A structured entity within a schema that represents a specific data object. It inherits attributes from the schema and defines unique characteristics for individual objects.

- name: The designated name of the object.
- Description: A short summary outlining the key characteristics of the object.
- creation\_date: The timestamp when the object was inserted. For example, "2025-02-17 08:56:09"
